About Epionet:

Coming to the market at an ideal time, with a product that is streets ahead of the larger players in the marketplace, Epionet has taken the web services concept to reality, revolutionising the delivery of business applications. Web Services can be sold, rented, leased or used on a pay-per-use model and can be accessed via an ASP or in an Enterprise Portal creating a unique inter/intra/extranet experience for business users. The solution is backed up by Epionet's rapid application development and deployment (EpioRADD™) environment. The result represents a revolution in how IT systems are developed.

Business Leading Technology

How a business is run should not be compromised because of inflexible technology. Technology should be the servant of business, not the other way around. At Epionet, we strive to ensure that our products reflect this principle.

Epionet News:**Fran Rooney joins the board of Epionet**

Epionet, the Dublin based developer of the world's first web services development and deployment system, has announced that Fran Rooney has joined the board of the company. This appointment will greatly enhance the board of Epionet and its ability in targeting international markets. This is a significant expansionary move for the Company.

Mr. Rooney, founder and former Chief Executive of Baltimore Technologies has significant international experience of hi-growth strategies for expanding technology companies and his appointment will greatly enhance Epionet's ability to target key international markets.

Mr. Rooney will form part of a strong board, which will be responsible for guiding Epionet through the coming years and an expansion strategy, which has been developed and finalised by Epionet.

Speaking at the appointment James Brennan, Chairman, Epionet said:

"We are delighted with Fran Rooney's appointment. We came out of a three year development cycle in May and have had huge international interest in our system since then. Fran's experience in international markets and running a global organisation will be a huge benefit in Epionet entering new markets and growing internationally."

Commenting on the appointment Fran Rooney said:

"I am pleased to accept this appointment to Epionet. The company has developed exciting technology which will offer customers and organisations a highly effective platform for managing their Web Services strategy. This technology will greatly enhance organisations ability to rapidly develop and deliver integrated web services and bring these to market in a highly cost effective manner."

Epionet attend Partech International Web Services Conference in the US

Epionet have gained US interest from attending the Partech International Web Services Conference in San Francisco. Taking place on the 31st of May 2001, the conference offered a unique opportunity for technologists and businesspeople to meet with Epionet and learn more about its web service solutions.

Following on Epionet's success at e-XPO 2001, the company has gained much interest from many US technology leaders. The company's emergence in the US has been reflected both in the [press](#) and in the many new contacts now developing into business relationships.

Epionet made contact with many key players at the event and discussed its innovative offering regarding web services. The Partech International Conference invited all those interested in web services to learn more from each other and from the main players in the field. It has now become clear that Epionet is one of those players. A one-day conference, it took place at the W Hotel, San Francisco. For more information on the conference, visit www.partechintl.com.

Epionet in the news:

BUSINESS AND FINANCE

"Former Baltimore Technologies chief Fran Rooney today announced he has joined the board of a Dublin web development company, Epionet."

IRISH COMPUTER

"Amid the dot bombs and software slip-ups, one Irish company has kept its head down and worked away on development. Now Epionet believes it has a world leader in web services management technology."

RED HERRING

"Epionet has a decent value proposition. Its software enables B2B enterprises to quickly construct and deploy Web sites across a wide spectrum of computer languages."
